- TEMPERATURE RANGE 0°C TO 150°C

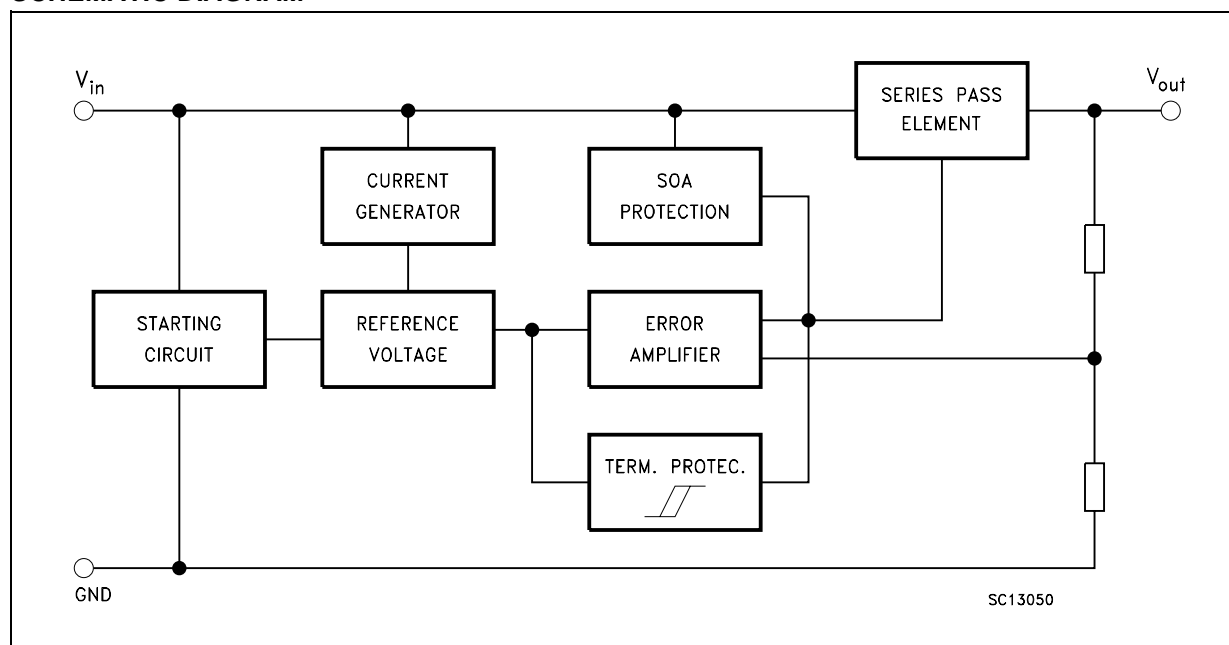

DESCRIPTION

The PB137 is a positive voltage regulator able to provide 1.5A, at $V_O = 13.7\text{V}$ and is intended as a charger for lead acid battery. The main feature is a reverse leakage current (Max $10\ \mu\text{A}$ at $T_J = 0$ to 40°C V_I = floating and $V_O = 13.7\text{V}$). It is available in TO-220 and it employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat-sinking is provided, they can deliver over 1A output current.
